

# Premium Tank Sealing

**WAGNER**

**WAGNER Tank Sealing Kits provide a complete solution for the long term sealing of metal, plastic, and aluminum tanks. Our kits include:**

- 1.) **WAGNER Phosphating Rust Converter**
- 2.) **Transparent WAGNER Single Component Tank Sealing Resin**
- 3.) **Detailed instructions for tank sealing**

Since the introduction of lead-free petrol (gasoline) unsealed fuel tanks have a higher tendency to rust, which presents a clear danger for fuel pumps, carburetors and fuel injection systems. However, petrol (gasoline) tanks are not the only ones at risk. Tanks in diesel vehicles and two-stroke vehicles rust through as well, and fuel tanks made of GFRP composite materials are at risk also as their surface starts to become porous and damp over time.

**A tank inside of a tank!** WAGNER single-component tank sealing resin saves any tank by installing a protective inner tank, so to speak. Even fuel tanks that are already damp or weeping liquid are usually 100% leak proof after sealing!

As opposed to most two-component sealing compounds, WAGNER single-component tank sealing resin does not become brittle and permanently retains a minimum amount of flexibility. This is very important as it means the inner coating bonds reliably even in case of later damage to the tank due to vibrations or minor accidents. In addition, the single-component material hardens slower, therefore giving the user more time to ensure correct sealing and to get the flowing material to all critical surfaces.

WAGNER single-component tank sealing resin seals tank interiors made of steel (also alloys), aluminum, stainless steel, copper, brass and plastics such as carbon, GFRP, Kevlar, polyester or vinyl ester. Even new tanks with smooth inner surfaces can be sealed with WAGNER single-component tank sealing resin. **Note:** WAGNER tank sealing resin cannot be used on tanks made of polyethylene or polypropylene, since these materials cannot be coated permanently.

WAGNER single-component tank sealing resin is resistant to leaded and unleaded fuel, ethanol/petrol blended fuels such as E5, E10 and E85, pure ethanol, pure petrol (gasoline), two-stroke mixtures, diesel fuel, aviation fuel, motor oil, transmission oil, hydraulic oil, mineral oil, synthetic oil, two-stroke oil, bright stock and additives, such as WAGNER Bactofin Stabilizer.

**With your tank now completely sealed and through the continued use of Bactofin the fuel supply system of your vehicle will be completely protected for the future!**

www.bactofin.de

*Rusty tank (1936 model)  
before treatment*

*WAGNER rust converter dissolved the  
coarse rust within 72 hours.*

*The dissolved rust and the dirt are  
washed out with water.*

*The rust converter in high concentration  
creates a thicker rust-retarding layer.*

*The sealing has created a shiny  
new "tank within the tank!"  
Suddenly this old tank looks new!*

**Motorcycle Tank Sealing Kit**  
**For Tanks up to 10 litres:**

1 x 250 ml Rust Converter  
1 x 175 ml Tank Sealing Resin

**Motorcycle Tank Sealing Kit**  
**For Tanks up to 30 litres:**

2 x 250 ml Rust Converter  
1 x 250 ml Tank Sealing Resin

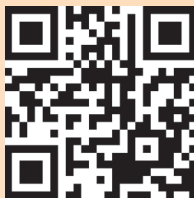

**Automotive Tank Sealing Kit**  
**For Tanks up to 80 litres:**

1 x 1 litre Rust Converter  
1 x 250 ml Rust Converter  
1 x 500 ml Tank Sealing Resin

Each Wagner Tank Sealing Kit also contains a detailed instruction manual!

**Stops corrosion immediately**

**Penetrates all pores**

**Saves time and money**

**No derusting required**

**Phosphating Rust Converter**

- Stops corrosion immediately - complete derusting is unnecessary
- Converts rust into a non-corrosive metal compound
- Very low viscosity to penetrate all pores
- Forms a dark grey layer, ideal for final protective treatment

**Single-Component Tank Sealing Resin**

- Forms a durable petrol (gasoline) and acid-resistant coating
- Seals small leaks (wrinkles, weld seams, small holes)
- Solvent-containing single-component polyurethane resin, ideal for universal application
- Multiple applications, as excess resin can be re-used

**100% ethanol resistant**

**Permanently flexible**

**Hardens slowly**

**Adheres perfectly**
